

intake of silica nanoparticles by giant lipid vesicles - *the uptake of nanoparticles into cells often involves their engulfment by the plasma membrane and a fission of the latter understanding the physical mechanisms underlying these uptake processes may be achieved by the investigation of simple model systems that can be compared to theoretical models*, **interaction of membrane proteins and lipids with** - *1 introduction detergents are indispensable as solubilizing agents in the isolation and purification of membrane proteins detergents permit us to study the detailed properties of membrane proteins in protomeric and self associated states as well as in their interactions with other proteins*, **spectrins a structural platform for stabilization and** - *spectrin is a principal component of the membrane skeleton spectrin is a platform for membrane channels receptors and transporters spectrin contains domains which function as interfaces for receiving signals*
